

SECURED, HIGH-PERFORMANCE TELEWORKER CONNECTIVITY

Delivering Enterprise-Grade Networking for Remote Workers

In a recent survey of CEO's, over 30% expect remote working to become a common feature of most employees work schedule.

IT leaders today are evaluating the evolving workplace to design and secure their network for the future, taking into consideration that employees are leveraging their shared residential-class connectivity for remote work.

Traditional approach of using VPNs to provide secure access to the companies' applications can be an insufficient long-term strategy when used over a poor and highly shared internet connection.

Common problems using Home Networks

Consumer-grade home networks can stand in the way of effective collaboration and productivity, these include:

- Choppy voice and video calls
- Screen sharing failures
- Sluggish application performance
- Disconnection of VPN's
- End User overhead troubleshooting a client VPN connection

Globalgig solution

Globalgig offers a simple-to-install Teleworker service bundle that provides enterprise-grade network performance and security delivering:

- Expanded and secured WAN edge to the teleworker endpoint
- Improved end-user experience with traffic smoothing capabilities that can steer traffic across diverse connections
- Increased network resiliency with a diverse redundancy path through wireless LTE and 5G where available

Key benefits

of the Globalgig Teleworker Solution

Security

- Capability to configure and enforce policies set by the organization's security department with granular permissions
- Segmentation of home traffic from secure business traffic, preventing adjacent attacks from home devices not under corporate control
- Ability to build VPN tunnels to the company application head-ends

Performance

- Multi-WAN capable to enable real-time application routing, providing superior end user experience for business-critical applications
- Ability to enforce local QoS, preserving sufficient bandwidth for business application

Resiliency

- Wireless LTE failover connection providing a diverse and redundant path
- Seamless connectivity for voice and video

Ease of Installation

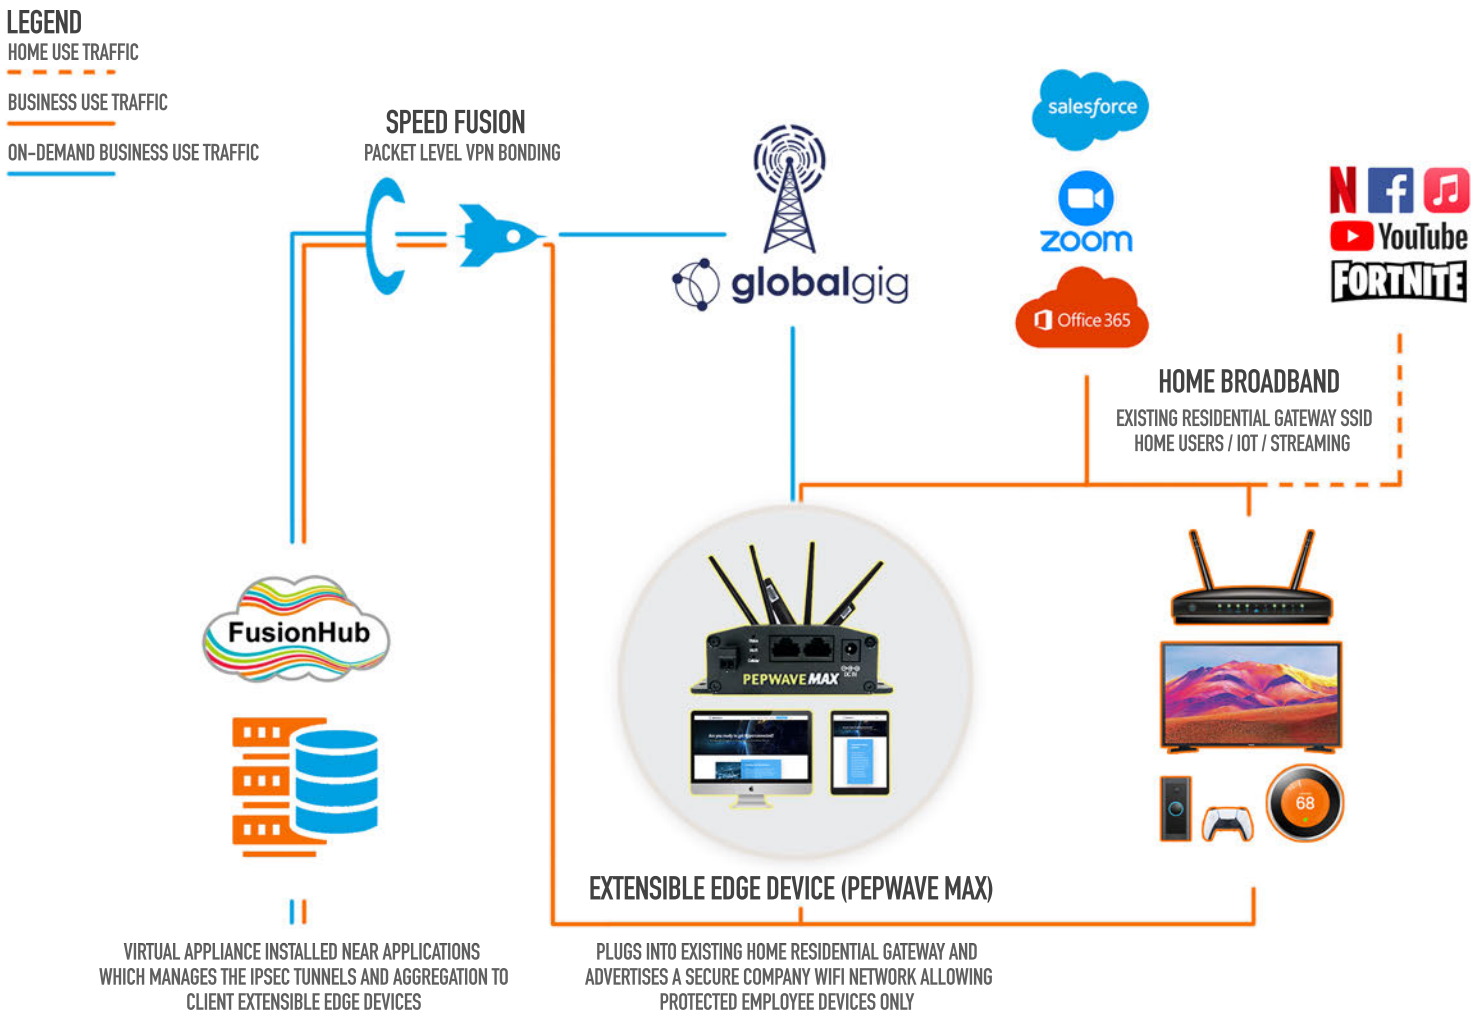

- Light-touch provisioning to lower upfront costs and speed to deployment
- Virtual appliance for head-ends - datacenter and cloud

Low cost

- Low capital investment and recurring expenses
- Incorporates cloud orchestration to minimise ongoing operational expense

Globalgig's Teleworker solution enables businesses to easily extend the network edge to exponentially more locations than previously considered.

It is an affordable and secured the solution for the remote worker that can be centrally managed to provide the optimal end-user experience. The solution bundles all the critical elements from the end-user device to the wireless connectivity and virtual appliance for aggregation of WAN edge.

About Globalgig

Globalgig orchestrates hyperconnectivity for the enterprise business continuum using managed communications solutions. Globalgig provides wireless connectivity across a 200-plus country footprint and offers a full suite of communications services and products including Hosted VoIP, Mobile Device Management, Wi-Fi Hotspots, Remote Office and Backup, Technology Expense Management and IoT/M2M connectivity solutions. Globalgig is headquartered in San Antonio, Texas, with offices across the U.S., and in the UK, France, Morocco, Mexico and Australia.
