

GLOBALGIG ORCHESTRATES HYPERCONNECTIVITY

Simplifying global communications with one account team, one contract and one invoice.

Connectivity Solutions that Meet the Worldwide Demands of Today's Business

Enterprise businesses require on-demand network access across geographic borders, diverse communications technologies, and disparate devices in real-time. Globalgig orchestrates hyperconnectivity for enterprise businesses by providing globally managed communications solutions. Offering a full suite of wireless, mobility, voice, wireline and managed network services, Globalgig is the singlesource for delivering integrated and ubiquitous connectivity services world-wide.

SD-WAN

Globalgig's managed SD-WAN solution provides a transport-independent, virtualized WAN across any combination of terrestrial and wireless WAN links, enabling uninterrupted connectivity to enterprise sites, cloud service providers and SaaS applications. We provide a managed, turn-key SD-WAN solution built using industry leading platforms recognized by Gartner Research including Palo Alto Networks, Cisco, Cradlepoint, and Peplink. It is our engagement process coupled with our expertise with these platforms and wireless that make us truly unique.

Global Networking

Providing comprehensive solution covering Layer 2 and Layer 3 devices, switches, routers, virtual machines, Globalgig is uniquely positioned to integrate wireline network with wireless services to create innovative solutions.

Public IP Services

- Business Broadband
- Dedicated Internet
- IP Transit

Private IP Services

- Ethernet Private Line (EPL)/Virtual Private Line (EVPL)
- MPLS IP-VPN
- Virtual Private LAN services

Multinational Transport

Globalgig provides multinational transport services, streamlining contract administration, network management, currency conversion for billing and customer support. We can meet your local, national and international connectivity needs, providing seamless network access globally.

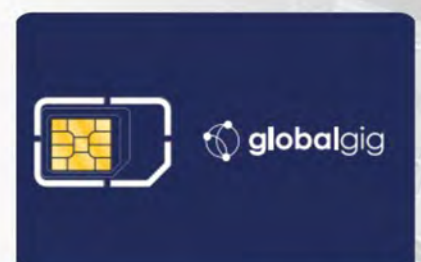

Wireless WAN for Primary and Failover Connectivity

Wireless WAN services as the primary network connectivity are ideal for locations inaccessible by wireline networks or where connectivity is needed for lower bandwidth applications such as branch offices, point of sale locations, construction sites, kiosks and ATMs. Globalgig's 4G/5G wireless broadband connection can be bundled with a managed wireless router to provide the ideal solution for business continuity. In the event of a service outage, Globalgig's cloud-managed router will automatically and seamlessly switch over to the wireless broadband connection.

Global MVNO with a 200+ Country Footprint

Globalgig's patented multi-carrier SIM card can be used in any 2G, 3G, 4G/LTE enabled device such as wireless routers, mobile and IoT devices. Our full suite of services give global businesses and our partners the foundation to create innovative & customized solutions:

- One SIM with 200+ country footprint
- Flexible and customizable usage plans with data sharing and pooling
- Static IP and private networking

IoT & Mobile Broadband | LTE, 5G and eSIM

Network connectivity remains a key element to any successful IoT/M2M solution implementation. Globalgig wireless connectivity services for IoT/M2M are ideal for low power consumption, industry specific data collection applications such as industrial monitoring, smart devices, equipment health management vehicle tracking and other innovative applications.

Mobile Broadband

Globalgig's Multi-IMSI SIM and e-SIMs can be leveraged for Mobile Broadband solutions such display advertising, mobile workforce, temporary office, remote locations, and mobile travelers. Globalgig also offers a variety of wireless hardware options that can be bundled for specific customer use-cases.

Orchestra - the Ultimate SIM & Data Management Platform

Orchestra is Globalgig's API-based SIM and data management platform. With a single pane of glass, customers can access usage, billing and location data for each SIM. Orchestra gives customers the ability to optimize expenses by giving detailed drill-down views on wireless data usage for each SIM/device. Powerful API extensibility give administrators reduced points of management and the ability to activate/deactivate and suspend SIMs.

Business Voice Services

SIP Trunking

SIP trunking services are provisioned on Globalgig's private network, delivering superior performance and call quality. Customers can achieve end-to-end global SIP connectivity through Globalgig's extensive international coverage.

Hosted PBX

Globalgig Hosted PBX solution is a feature-rich service that can easily connect multiple locations, satellite offices and remote employees. Reduce capital expenditures, gain flexibility to scale seats up or down, and increase organizational accessibility and presence with our Hosted PBX solution.

POTS Replacement

Globalgig's enterprise-grade solutions can convert all types of existing POTS lines with next generation technologies such as VoIP and cellular, from voice, fax, point of sales terminals to connections for fire panels and alarm lines. Whether using VoIP or cellular technology to replace POTS lines, the monthly cost savings can be significant.

Globalgig – Simply Easier

Globalgig provides turn-key services that leverages our extensive global carrier partnerships and contracts to enable the customizing and creation of optimal solutions. Our Network Operations Center is geo-diverse, staffed by knowledgeable and experienced staff, providing flexible, multi-tiered customer care. Globalgig is a unique service provider with the ability to deliver integrated wireless, wireline, voice and managed network solutions, simplifying global communications with one account team, one contract and one invoice.
